PREHISTORY

During the trainings on planning, strategy development, and business strategy, which are focused on a strategy for achieving results, we noticed that people often act on the basis of either previous experience (that is, on the developed model) or on the first solution, or on a more obvious solution. Rarely, participants looked at the whole situation as a whole and identified the key elements that really affect the achievement of the result. Therefore, this game is, in the language of cinematography, a prequel to strategic planning, to any training and business game aimed at achieving results. It allows you to focus on the system analysis, the proposed specific task or situation.

Time is running out, business is changing - it's time for new games!

An enticing retro game for energetic and smart gentry with a systemic mindset

AS A RESULT THE PARTICIPANTS WILL BE ABLE TO:

- ❖ Understand the importance of the system.
- ❖ Improve their understanding of complex and ever-changing organizational obstacles.
- ❖ Build a causal relationship between emerging difficulties and related solutions.
- ❖ Think about problems and opportunities with a new, systemic approach.
- ❖ Go beyond the limits of «box thinking».
- ❖ Look at emerging situations from the perspective of different stakeholders.

WHY DO WE NEED SYSTEM TINKING?

Complexity and volatility are integral parts of business.

Many of the tasks and challenges that managers and professionals face today include different elements, factors, and stakeholders. And it is necessary to be able to see these relationships and the system as a whole. A one-sided view or one-sided solutions can only lead to new problems and difficulties.

Therefore, **the ability to analyze the system as a whole** and understanding how it works, helps to make more effective decisions, to forecast risks and to notice non-standard options.

GAME SCENARIO

One of the railway employees named Zakarias Levala found several large diamonds in the sands on distant sections of the road. He blabbed this secret behind a mug of beer at a local pub. The first searches showed that diamonds exist in several parts of the desert. The Luderitz Mayor singled out equal sections to several teams. The bank issued interest-free loans for each team.

You also organized a team, which will develop this deposit. You need to draw up a plan of action, purchase the necessary equipment and arrange housing and life. But hurry up! It seems that the time of diamond fever begins ...

MISSION:

To create a stable system that will allow preserving and processing all valuable spots (diamond sites) in the allocated territory. But, as always, plans often diverge from life. Within 12 months the team will have to face problems, challenges, dramas and tragedies. If the team has thought through its plan carefully and systematically, if it has predicted possible events, then it will calmly or with small losses overcome all difficulties. If not, then...

APPLICATION:

- ❖ Separate event;
- ❖ Combination with other trainings;
- ❖ The assessment of the activities of the team or the competencies of individuals;
- ❖ Nonstandard conduction of conferences and cyclic meetings.

COMPETENCIES:

- ❖ System Thinking
- ❖ Strategic Planning
- ❖ Risk Management
- ❖ Entrepreneurship
- ❖ Leadership

System Thinking
20 – 50 participants | 3-4 hours | business owners, managers,
senior and middle managers, product and marketing specialists.
